Пояснения к таблицам 5

Поправки для приведения средних суточных температур воздуха к средней за 24 часа 11

Таблицы

Раздел I. Температура воздуха

I. Средняя месячная и годовая температура воздуха 13

2. Средний минимум температуры воздуха 32

3. Абсолютный минимум температуры воздуха 51

4. Средний максимум 70

5. Абсолютный максимум температуры воздуха 106

6. Даты первого и последнего заморозков и продолжительность безморозного периода 142

7. Даты перехода средней суточной температуры воздуха через 0, 5, I0 и I5^0 152

8. Суммы средних суточных температур воздуха выше 0, 5, I0 и I5^0. 163

Раздел 2. Температура почвы

I. Средняя месячная и годовая температура поверхности почвы 171

2. Средний максимум температуры поверхности почвы 189

3. Абсолютный максимум температуры поверхности почвы 206

4. Средний минимум температуры поверхности почвы 223

5. Абсолютный минимум температуры поверхности почвы 240

6. Средняя месячная температура верхних слоев почвы по коленчатым термометрам 258

7. Средняя месячная и годовая температура почвы по вытяжным термометрам . 291

8. Число дней с температурой почвы $\leqslant 0^0$ 322

9. Даты первого и последнего заморозков на поверхности почвы и продолжительность безморозного периода 330

I0. Даты первого и последнего морозов в почве 339

II. Глубина проникновения температуры 0^0 в почву (см) 343

I2. Глубина промерзания почвы (см) 346

Алфавитный указатель станций 350

Список метеорологических станций 354

Карта сети метеорологических станций 355

П Р Е Д И С Л О В И Е

Настоящее издание содержит метеорологические данные за отдельные годы по 47 станциям, расположенным на территории Эстонской ССР, и является продолжением издания „Климатологический справочник СССР. Метеорологические данные за отдельные годы", вып. 4 (1954), в котором помещены результаты наблюдений до 1950 г.

Анализ качества материалов проведен по методам и под руководством Главной геофизической обсерватории им. А.И. Воейкова в период составления и подготовки к печати "Справочника по климату СССР", вып. 4 (1965).

В настоящем издании помещены данные за отдельные годы за период 1951-1965 гг. По некоторым станциям, данные которых не были опубликованы в предыдущем издании, они напечатаны за все годы. Кроме того, за весь период наблюдений напечатаны данные по некоторым таблицам, не включенным в прежнее издание (раздел I, табл. 4, 5, 7 и 8; раздел 2, табл. I, 2, 3, 4, 5, 9, I2).

Средние значения температуры воздуха (раздел I, табл. I), полученные из наблюдений в I, 7, I3 и I9 час., приведены к средней температуре за 24 часа путем введения соответствующих поправок. Поправки приводятся в отдельной таблице.

При использовании средней месячной температуры воздуха за отдельные годы за весь период наблюдений (до и после 1950 г.) необходимо учесть, что в данные температуры воздуха, помещенные в настоящем издании, введены новые поправки, уточненные при составлении „Справочника по климату СССР"(1965 г.). В связи с этим из данных температуры воздуха до 1951 г. следует вычесть старые поправки, помещенные в „Метеорологические данные за отдельные годы", часть I, 1954 г., и ввести новые.

Настоящее издание, часть I, состоит из двух разделов: раздел I содержит данные за отдельные годы по температуре воздуха и раздел 2 - по температуре почвы.

Метеорологические данные за отдельные годы составлены в отделе климата Таллинской гидрометеорологической обсерватории З.П. Прохоровой, М.К. Пярн, Х.М. Ребане и Е.И.Бридиной, под общим руководством З.П. Прохоровой.

П О Я С Н Е Н И Я К Т А Б Л И Ц А М

Р а з д е л I. Т е м п е р а т у р а в о з д у х а

Т а б л и ц а I. Средняя месячная и годовая температура воздуха.

В таблице приведены средние месячные и годовые значения температуры из наблюдений в I, 7, I3 и I9 час., приведенные к средним температурам за 24 часа путем введения поправок, которые были вычислены по записям термографов.

Т а б л и ц а 2. Средний минимум температуры воздуха.

В таблице приведены средние месячные и годовые величины из ежедневных отсчетов по минимальному термометру , установленному в психрометрической будке.

Т а б л и ц а 3. Абсолютный минимум температуры воздуха.

В таблице приведены наиболее низкие значения температуры по месяцам и за год, наблюдавшиеся по минимальному термометру в психрометрической будке.

Т а б л и ц а 4. Средний максимум температуры воздуха.

В таблице приведены средние месячные и годовые величины из ежедневных отсчетов по максимальному термометру, установленному в психрометрической будке.

Т а б л и ц а 5. Абсолютный максимум температуры воздуха.

В таблице приведены значения наивысшей температуры воздуха из наблюдений по максимальному термометру.

Т а б л и ц а 6. Даты первого и последнего заморозков и продолжительность безморозного периода. В таблице приведены даты первого заморозка осенью и последнего заморозка весной по показаниям минимального термометра в психрометрической будке на высоте 2 м.

Продолжительность безморозного периода получена путем подсчета числа дней между помещенными в таблицу датами последнего и первого заморозков.

Т а б л и ц а 7. Даты перехода средней суточной температуры воздуха через 0, 5, I0 и I5° и число дней с температурой воздуха выше 0, 5, I0 и I5°.

Даты наступления средних суточных температур выше 0, 5, I0 и I5° получены графическим путем по кривой годового хода температуры воздуха (гистограмма), построенной на основании средних месячных температур. Снятые с кривой даты характеризуют наступление и окончание устойчивого периода с температурой выше определенных пределов.

Продолжительность устойчивого периода с температурами выше указанных пределов получена подсчетом числа дней между датами перехода температур через определенные пределы.

Таблица 8. Суммы средних суточных температур воздуха выше 0, 5, 10 и 15°.

Представленные в таблице суммы вычислены по средним месячным температурам за год. Суммы положительных температур подсчитывались за периоды от дат перехода средних суточных температур через 0, 5, 10 и 15° весной до дат перехода через эти же пределы осенью. Суммы температур за полные месяцы подсчитывались путем умножения средней температуры за месяц на число дней в этом месяце, а суммы температур за неполные месяцы получены умножением средней температуры отрезка времени на число дней, заключенное в этом отрезке. Средняя температура части месяца и число дней в этой части определялись по кр ой годового хода температуры воздуха. Сумма температур для всего периода получена путем сложения вычисленных сумм за отдельные месяцы.

Раздел 2. Температура почвы

Температура почвы определяется по показаниям жидкостных (ртутных и спиртовых) термометров, которые устанавливаются на поверхности почвы и на разных глубинах в почве.

Срочный, максимальный и минимальный термометры устанавливаются в теплое время года на освобожденном от растительности участке, а зимой – на поверхности снежного покрова. Резервуар и внешняя оболочка термометров наполовину погружаются в почву или снег.

Температура почвы на глубинах 5-20 см измеряется с помощью коленчатых термометров, которые устанавливаются в теплое время года под оголенной поверхностью почвы. На больших глубинах (0,2 – 3,2 м) устанавливаются вытяжные термометры под естественным покровом (летом трава, зимой снег). В отдельных случаях (Таллин) для специальных целей вытяжные термометры устанавливаются под оголенной поверхностью или под бетонной плитой, которая зимой очищается от снега.

Все напочвенные и почвенные термометры устанавливаются на ровных, не затеняемых от солнца местах.

Таблица 1. Средняя месячная и годовая температура поверхности почвы.

В таблице приведены средние месячные и годовые значения температуры из наблюдений по срочному термометру.

Таблица 2. Средний максимум температуры поверхности почвы.

В таблице приведены средние месячные и годовые значения температуры из ежедневных отсчетов по максимальному термометру на поверхности почвы.

Таблица 3. Абсолютный максимум температуры поверхности почвы.

В таблице приведены значения наивысшей температуры из наблюдений по максимальному термометру на поверхности почвы.

Таблица 4. Средний минимум температуры поверхности почвы.

В таблице приведены средние месячные и годовые значения температуры из ежедневн-

ных отсчетов по минимальному термометру, установленному на поверхности почвы.

Таблица 5. Абсолютный минимум температуры поверхности почвы.

В таблице приведены наиболее низкие значения температуры, наблюдавшиеся по минимальному термометру.

Таблица 6. Средняя месячная температура верхних слоев почвы по коленчатым термометрам.

Данные таблицы характеризуют термический режим верхних слоев почвы (5 - 20 см) в теплый период года под оголенной поверхностью.

Таблица 7. Средняя месячная и годовая температура почвы по вытяжным термометрам.

Данные таблицы характеризуют термический режим почвы на глубинах 0,2, 0,4, 0,6, 0,8, 1,2, 1,6, 2,4 и 3,2 м под естественной поверхностью. На станции Таллин наблюдения по вытяжным термометрам производились на двух участках: под естественной и под оголенной поверхностью.

Таблица 8. Число дней с температурой почвы $\leqslant 0^{\circ}$.

В таблице приведено среднее число дней с температурой почвы на глубинах равной или ниже 0°, т.е. число дней с морозом в почве.

Таблица 9. Даты первого и последнего заморозков на поверхности почвы и продолжительность безморозного периода.

В таблице приведены даты первого заморозка осенью и последнего заморозка весной по показаниям минимального термометра на поверхности почвы.

Продолжительность безморозного периода получена подсчетом числа дней между датами последнего и первого заморозков.

Таблица 10. Даты первого и последнего мороза в почве.

В таблице помещены даты первого мороза осенью и последнего мороза весной на разных глубинах, полученные по вытяжным термометрам.

Таблица 11. Глубина проникновения температуры 0° в почву (см).

Данные таблицы характеризуют глубину слоя почвы, на которую проникают отрицательные температуры.

Глубина проникновения температуры 0° в почву вычислена по ежедневным данным наблюдений путем интерполяции между температурой почвы на соседних глубинах. Вычисления производились начиная с глубины 20 см. Меньшие значения глубин с температурой 0° в данной таблице не отражены.

Глубина проникновения температуры 0° в почву не определяет глубины промерзания почвы, замерзание почвы происходит при температуре ниже 0°. Следовательно, глубина промерзания почвы меньше, чем глубина проникновения температуры 0° в почву.

Таблица 12. Глубина промерзания почвы (см).

В таблице помещены значения глубины промерзания почвы на первое число каждого месяца, а также наибольшая глубина промерзания почвы за зиму. Наблюдения над промерзанием почвы производились под естественным снежным покровом, на большинстве станций на полях с озимыми культурами, а на станциях Таллин, Тийрикоя и Сыру - на метеорологических площадках. Глубина промерзания почвы определялась по наличию кристаллов льда и цементации почвы в пробах, взятых со стенок шурфов. С зимы 1957--58 гг. промерзание почвы определялось по мерзлотомеру Данилина.

ЗАМЕЧАНИЯ ПО ОТДЕЛЬНЫМ СТАНЦИЯМ

Тийрикоя. Нарушение однородности ряда по температуре почвы вызвано переносом станции в октябре 1957 г.

Выру. Нарушение однородности ряда по температуре воздуха и особенно по температуре почвы связано с переносом станции в январе 1954 г.

Валга. Перенос станции в сентябре 1955 г. из застроенной части города на окраину вызвал некоторую неоднородность в температуре воздуха и особенно в температуре почвы.
