EDUCATION IN THE USA The School Years

Public education in the United States is expected to offer equal educational opportunities to everyone enrolled in secular schools, which are publicly controlled and publicly financed, with free tuition, free books and compulsory attendance.

There is no mention of education in the Constitution, and each state is responsible for its own educational system. Public schools are financed primarily by local and state taxes, and the amount of money spent on public school students varies from state to state. The great differences in expenditures by communities within each state depend on the amount of local funds available for public education. Often, well-to-do communities spend several hundred dollars more for each child than poorer towns nearby do. These figures reflect differences in expenditures for such items as teachers' salaries, purchase of books, and school construction and maintenance.

Despite these differences, there is general uniformity in the organization and curricula of public schools throughout the country. Each state is divided into local school districts. Usually a state department of education sets the general requirements that local communities or school districts must meet. Local school boards, usually elected by members of their communities, are responsible for the detailed organization and operation of their schools. This responsibility includes hiring teachers and administrators and setting their salaries.

The 12 years of public school education usually begin when a child is 6 years old. Some school systems are divided into eight years of primary school and four years of secondary school. Primary schools are often called elemen-

tary schools, and secondary schools are called high schools. Many systems combine the last two years of elementary school and the first year of high school in what is known as junior high school. This is followed by three years of senior high school. A large number of school systems also have a kindergarten program that provides one year of preschool education.

Entrance to high school is automatic when a student completes elementary school. No examinations are required. High schools usually offer courses in English literature and composition, the social sciences, mathematics, laboratory sciences, and foreign languages, as well as art, music and physical education. After completing certain basic requirements, students are often permitted to choose the subjects that best suit their plans for college or for work after graduation.

Extracurricular activities including clubs, school newspapers and magazines, and sports are important features of high school life. In addition, student representatives, elected by their fellow students, often work with school officials in planning school policies. This arrangement is an effort to encourage students' interest in self-government and in their responsibilities as citizens.

Most high schools are organized on what is called a comprehensive basis, which means that programs in academic (college preparatory), vocational, and general education are offered in the same school. In some large cities specialized high schools concentrate on just one type of program. In addition, many communities provide programs for handicapped children (children who are deaf, blind, crippled, emotionally disturbed, or mentally retarded) and children who are specially gifted, intellectually or artistically.

Eligibility requirements for public school teachers vary from school district to school district, but most elementary school teachers must have a bachelor of arts degree with a major in education. High school teachers have usually majored in the field of their special interest and, in addition, have a master of arts degree in education.

More than 10 percent of school-age children attend private schools. These include a few secular schools, but most are operated by church groups, especially the Roman Catholic church. Because of the absolute separation of church and state in the United States, children are not allowed to receive religious instruction in public schools.

COLLEGES AND UNIVERSITIES

More than 60 percent of all school graduates continue their education after graduation. Many attend colleges that offer four-year programs leading to a bachelor's degree. College students are called undergraduates, and their four years of study are divided into the freshman, sophmore, junior, and senior years. In most colleges the first two years are designed to provide a broad general education, and during this time the college student is usually required to take courses in general areas of study, such as English, science, foreign languages, and social science. By the junior year the student begins to major in one particular field of study, or discipline.

Some institutions of higher learning offer only the four-year college program. A university offers graduate or postcollege programs, as well. Graduate degrees in fields such as English literature, chemistry, and history are granted by graduate schools of art and sciences. These schools may offer one- or two-year programs leading to a master's degree (M.A.), and programs lasting three years or more that lead to the degree of Doctor of Philosophy (Ph.D.). A candidate for a Ph.D. must meet certain course requirements in his of her field, pass written and oral examinations, and present a written thesis based on original research. Some universities offer postdoctoral programs that extend study and research beyond the Ph.D.

Many universities also have what are called professional schools for study in such fields as law, medicine, engineering, architecture, social work, business, library science, and education. Professional schools differ widely in their requirements for admission and the lengths of their programs. Medical students, for example, must complete at least three years of premedical studies at an undegraduate school before they can enter the three- or four-year program at a medical school. Engineering and architecture students, on the other hand, can enter a four- or five-year professional school immediately upon completion of secondary school.

The various disciplines, or fields of study, are organised by department. These departments are staffed by faculty members ranging from full professors to instructors. A full professor has tenure, which is a permanent appointment with guaranteed employment at theinstitution until his or her retirement. Ranking below the full professors are the associate professors, who may not have tenure, depending on the policy of the particular college or university.Next are the assistant professors, who do not have tenure. At the bottom of this academic ladder are the instructors. They are usually young teachers who have just received their doctorates or will receive them shortly. Sometimes graduate students are employed as part-time teaching assistants while they are completing their graduate work.

Today almost six million men and more than five million women attend over 2500 colleges and universities. Approximately 90 percent of these schools are coeducational, which means that both men and women are enrolled in the same institutions. Colleges range in size from a few hundred students to many thousands. Some universities have more than 30,000 undergraduate and graduate students on one campus. A number of large state institutions maintain branches on several different campuses throughout the state. Classes vary from seminars, or small discussion groups, of fewer than 20 to large lecture courses for hundreds of students.

Approximately one-fourth of all college and university students attend private institutions. The rest study at state or municipal, publicly financed colleges and universities. Every state has at least one public university, and in addition there are several hundred state and locally supported colleges. The academic programs of these private and public institutions are very similar. Indeed, there

are only a few important differences between public and private colleges. Private colleges are privately organized and privately run; public institutions are operated under the control of state or local officials. The other differences involve admissions policies and the methods by which public and private institutions are financed.

Admission to a state university is usually open to all men and women who have graduated from high schools of the state and who have satisfactory high school records. Many state universities require students to earn high scores on achievement and aptitude examinations, but the underlying philosophy is that all students who want an education and are qualified should have the opportunity to continue their education at public institutions. Tuition rates are low, compared to private college costs, and scholarship aid and loans are frequently available.

Admission to some private colleges may be more selective and rigid than admission to some public institutions, and frequently the student body is smaller. High school applicants to some private colleges must submit detailed application forms, and they must take scholastic aptitude and achievement examinations. College admissions committees decide which students to accept, basing their judgement on these applications, the examinations, high school records, and other factors such as personal interviews with the applicants and letters of recommendation from high school teachers. For certain colleges, such as Harvard, Yale, Princeton, Stanford, and Columbia, applications usually far exceed the number of students who are accepted. In 1979, for example, Harvard received 12,900 applications for 1633 places.

The average private college tuition in the late 1970s was \$2980 a year. This figure was at least four times greater than the avarage public college tuition. For example, in the academic year 1979/1980 tuition costs at any campus of the University of California, a state institution; were under \$700. At Stanford University, a private school

in California, tuition costs totaled \$5595. These tuition figures do not include the costs of room, food, and other everyday living expenses. Some students receive scholarship assistance and loans to help pay for the cost of their education. Many students at private and public colleges work while they are attending school in order to pay their expenses.

Over 1500 American colleges and universities are privately organized and financed. More than 60 percent of the income of these institutions comes from student tuition payments. The rest comes from private gifts, endowment earnings, and some federal research grants, Because of steadily rising costs, many private institutions have had to raise tuition rates, reduce scholarship aid, and limit some academic programs. The poor financial condition of many private institutions is a very serious problem in the world of higher education today.

Student fees account for only 20 percent of the income of public colleges and universities. The rest comes from municipal or state and some federal government sources. Although public institution have also experienced the problem of rising costs, they have often been able to depend on state legislators for financial support. In large part this support may be explained by the legislators' response to the wishes of the people who elected them and to general acceptance of the American tradition that everyone who is qualified should have the opportunity to continue his or her climb up the educational ladder at publicly financed institutions.

In recent years there has been a considerable increase in the number of publicly financed community or junior colleges. Many of these schools offer two years of a regular four-year college program. Often junior college students transfer to four-year colleges to complete their schooling. Many community colleges also offer two-year programs of technical training for a variety of jobs, ranging from laboratory technician to automobile mechanic.

More than one hundred public and private colleges and

universities were originally established for black students. Now many of these schools have some white students as well. Among the best known of these predominantly black institutions are Howard and Fisk Universities and Tuskegee Institute.

RDUCATIONAL ATTITUDES

Student life at American universities is chaotic during the first week of each quarter or semester. Registering for classes, becoming familiar with the buildings on campus, buying books, adding and dropping classes, and paying fees are confusing for everyone. During this busy period there is little time for students to anticipate what they will later encounter in the classroom.

International students, accustomed to their countries' educational expectations, must adapt to new classroom norms in a foreign college or university. Whereas in one country prayer may be acceptable in a classroom, in another it may be forbidden. In some classrooms around the world students must humbly obey their teacher's commands and remain absolutely silent during a class period. In others, students may talk, eat, and smoke during lectures as well as criticize a teacher's methods or contradict his or her statements. It is not always easy to understand a new educational system.

DIVERSITY IN EDUCATION

There is considerable variety in university classrooms in the United States. Because of diverse teaching
methods and non-standardized curricula, no two courses are
identical. Undegraduate courses are considerably different
from graduate courses. The classroom atmosphere in expensive, private universities may differ from that in community
colleges which are free and open to everyone. State-funded

universities have different requirements and expectations than do parochial colleges. Nevertheless, there are shared features in American college and university classrooms despite the diversity of educational institutions of higher learning.

ACTIVE PARTICIPATION

Participation in the classroom is not only accepted but also expected of the student in many courses. Some professors base part of the final grade on the student's oral participation. Although there are formal lectures during which the student has a passive role (i.e., listening and taking notes), many courses are organized around classroom discussions, student questions, and informal lectures. In graduate seminars the professor has a "managerial" role and the students make presentations and lead discussions. The students do the actual teaching in these seminars.

A professor's teaching style is another factor that determines the degree and type of student participation. Some professors prefer to control discussion while others prefer to guide the class without dominating it. Many professors encourage students to question and challenge their ideas. Students who make assertions that contradict the professor's point of view should be prepared to substantiate their positions.

In the teaching of science and mathematics, the dominant mode of instruction is generally traditional, with teachers presenting formal lectures and students taking notes. However, new educational trends have emerged in the humanities and social sciences in the past two decades. Students in education, sociology, and psychology classes, for example, are often required to solve problems in groups, design projects, make presentations, and examine case studies. Since some college or university courses are "applied" rather than theoretical, they stress "doing" and involvement.

THE TEACHER-STUDENT RELATIONSHIP

Many instructors believe that an informal, relaxed classroom environment is conducive to learning and innovation. It is not uncommon for students to have easygoing and friendly relationship with their professors. The casual professor is not necessarily a poor one and is still respected by students. Although students may be in a subordinate position, some professors treat them as equals. However, no matter how agalitarian professors would like to be, they still are in a position of authority.

Professors may establish social relationships with students outside of classroom, but in the classroom they maintain the instructor's role. A professor may have coffee one day with students but the next day expect them to meet a deadline for the submission of paper or to be prepared for a discussion or an exam. The professor may give extra attention cutside of class to a student in need of help but probably will not treat him or her differently when it comes to evaluating school work. Professors have several roles in relation to students; they may be counselors and friends as well as teachers. Students must realize that when a teacher's role changes, they must appropriately adapt their behavior and attitudes.

INDEFENDENT LEARNING

Many teachers believe that the responsibility for learning lies with the student. If a long reading assignment is given, instructors expect students to be familiar with the information in the reading even if they do not discuss it in class or give an examination. (Courses are not designed merely for students to pass exams.) The ideal student is considered to be one who is motivated to learn for the sake of learning, not the one interested only in getting high grades. Grade-conscious students may be frustrated with isochers who do not believe it is neces-

sary to grade every assignment. Sometimes homework is returned with brief written comments but without a grade. Even if a grade is not given, the student is responsible for learning the material assigned.

When research is assigned, the professor expects the student to take the initiative and to complete the essignment with minimal guidance. It is the student's responsibility to find books, periodicals and articles in the library. Professors do not have the time to explain how a university library works; they expect students, particularly graduate students, to be able to exhaust the reference sources in the library.

Professors will help students who need it, but prefer that their students not be overly dependent on them. (Tois differs from teacher-student relationships in other countries.) In the United States, professors have other duties besides teaching. Often they are responsible for administrative work within their department. In addition, they may be obliged to publish articles and books. Therefore the time that a professor can spend with a student outside of class is limited. If a student has problems with classroom work, the student should either approach a professor during office hours or make an appointment.

THE HONOR SYSTEM

Ideally, the teacher-student relationship at universities is characterized by trust. The "honor system", imposed by the teacher and the university, demands that the student be honest in all areas of school work. Thus, cheating on tests, plagiarizing in written work, presenting others' ideas as original, and turning in homework completed by someone else are all prohibited.

Violation of the honor system can result in a student's failing a course, having a permanent record of the violation placed in the student's school files, or even being expelled from the university. Many students are also

aware that they can jeopardize their rapport with fellow students if they are dishonest. Students who cheat may lose the respect of other students, particularly those who study for exams and work independently. When leaving the classroom while students are taking an exam, an instructor may or may not say, "I expect you all to abide by the honor system." Even if the words are not stated, the student is expected to work alone and not to share answers.

COMPETITION

Relationship between students in the classroom can be cooperative or competitive. International students should not hesitate to ask for help if it is needed. There are courses, however, where grades are calculated in relation to other students' scores. Therefore, in classes where such a grading "curve" is used, students may be reluctant to share lecture notes or information for fear that their own grades will suffer.

There are other reasons for the presence of competition among students. A high grade point average is needed for entrance to superior graduate schools. Students feel pressure to achieve high grades when there are relatively few openings in graduate programs. In addition, when facing a competitive job market, graduates may be judged on the basis of their grade point average and faculty recommendations. Ultimately, it is the student who is responsible for succeeding in this competitive system.

The university classroom in the United States manifests cultural values through professors and students' expectations and attitudes. Competition is an example of only one value. Educational practices such as the honor system and student participation indicate a respect for individual responsibility and independence. Alternative teaching methods show a cultural preference for innovation. The manner in which education is provided in any country reflects basic cultural and social beliefs of that country.

Vocabulary

I. Students

2. 0. 0.000011010	
Undergraduate Student	student working for the bach-
	elor's degree
Freshman	first-year undergraduate
Sophmore	second-year undergraduate
Junior	third-year undergraduate
Senior	fourth-year undergraduate
Lower classman	freshman or sophmore
Upper classman	junior or senior
Graduate student	student who has received a
	bachelor's degree and is work-
	ing for a master's or docto-
	rate
Transfer student	student who has transferred
	$\begin{tabular}{ll} \textbf{from one college or university} \\ \end{tabular}$
	to another
Degree candidate	student who intends to take
	a degree and who has met the
	university's requirements for
	being formally admitted to
	candidacy

II. University Officers and staff

Board of Trustees	the legal governing body of
	a college or university; in
	universities, very often com-
	posed of prominent citizens;
	in colleges, commonly compo-
	sed of alumni
President (Chancellor)	chief executive official of
	a college or university; usu-
	ally chosen by the board of
	trustees
Registrar	- university official in charge
	of student records
Director of Admissions	- university official in charge
	of admitting students

Advisor	a faculty member appointed to
	assist individual students in
	his department in planning
	their programs (a foreign
	student advisor assists over-
	seas students in all depart-
	ments;
Deam	academic director of a sec-
	tion of the university (such
	es a school: Dean of the
	Graduate School, etc.); or a
	member of the administration
	in charge of specific cate-
	geries of students or types of
	activities (such as Dean of
	Men, Dean of Student Activiti-
	es, etc.)
Department head (Chairman)	faculty member in charge of a
	particular academic depart-
	ment (history, biology, for-
	eign languages, etc.)
Foculty	the teachers of a college or
	university
Projector	
Associate professor	second highest faculty rank
Assistant professor	-
Institutor IIIIIII	
uraqueto ansistent	a graduate student who is em-
	ployed to teach undergraduate
	courses or assist the faculty
	in other ways
Teaching Assistant (TA)	
	awarded special financial aid
	and who sometimes teaches
	courses in his speciality

III. Academic Periods	
Academic year	the school year, usually
	September to May or June
Term	•
	year
Semester	•
	of a school year
Trimester	-
	third of a school year
Quarter	
,	fourth of a school year
Session	a division of the school year
	according to the season in
	which it begins: Fall Session,
	Spring Session, Summer Session
IV. Courses and Groups of	Courses
Curriculum	
	(for example, a science curri-
	culum) or, collectively, all
	the cources offered in a col-
	lege or university
Liberal arts	the subjects of an academic
	course, including literature.
	nnilosophy, languages, histo-
	ry, etc., as distinguished
	from professional or technical
	studies; primerilycultural
	studies
Humanities	the branches of learning con-
	cerned with human thought and
	relations, as distinguished
	from the sciences, especially
	literature and chilosophy, and
	sometimes including the fine
	arts, history, etc.
Required course	a course which a student must
	take as part of his degree

	program
Prerequisite course	a basic or elementary course
	which must be taken before a
	student will be admitted to
	an advanced course in the
	same subject (for example,
	"History 100 is a prerequisite
	for History 300")
Dischire course	•
Elective course	a course which is not required;
	most degree programs provide
	for a certain number of elec-
	tives in addition to the re-
	quired courses
Major	the subject in which a student
	intends to take a degree; a
	field of specialization in
	which the student must take a
	required number of courses
Minor	a subject in which a student
	takes several courses (but
	less than in his major) as
	part of the degree requirements
V. Commonly Used Verbs	
	to enter a college or univer-
	sity or a specific course
Matriculate	*
	college or university, especi-
	ally as a candidate for a de-
	gree
Register	
	courses, paying tuition and
	fees, etc. (registration
	takes place at the beginning
Andit s asumos	of each term)
Audit a course	
70	receiving credit for it
Drop a course	to withdraw officially from a

,	course before its completion
Cut a class	to be absent from a scheduled
,	class; a "class cut" is used
:	in contrast to an "excused ab-
	sence"
Cram (slang)	to study very hard just be-
	fore an examination
Flunk (slang)	to fail
-	
VI. Miscellaneous Terms	
	an institution of higher learn-
	ing offering the first two
	years of undergraduate study;
	some of these institutions are
	called community colleges
	instead
Community college	a two-year institution of
	higher learning established to
	serve a specific geographic
	area such as counties or
	municipalities
Advanced standing	credit toward a degree allowed
	to a student for courses taken
	elsewhere or for high perfor-
	mance on special examinations
Tuition	the fee charged students to
	take courses
Student activities fee	money paid by the student for
	participation in non-academic
	activities at the university
Transcript	an official copy of a student's
	academic record (his courses,
	grades, credita)
Credit hours	•
	a course meets each week; a
	certain number of credit
	hours must be accumulated to
	receive a degree

G.P.A	- Grade Point Average and Qua-
	lity Point Index are common
	methods of expressing numeri-
	cally the average of a student's
	university grades; thus a G.P.
	A. or Q.P.I. of 2.0 might
	indicate a C average
On probation	- being warned of possible dis-
	missal because of poor grades
	or improper behavior; stu-
	dents on probation are often
	restricted in their activities
Dean's list	a list of honor students (stu-
	dents with high academic grades)
	published by the Dean's office
	each term
Scholarship, Fellowship	an award of money given by a
	university to help a student
	continue his studies; often
	the student must perform speci-
	fied work in return for his
	award (thus fellowship stu-
	dents often teach introductory
	courses)
Thesis	a long scholarly research pa-
	per required at some univer-
	sities for the master's de-
	gree
Dissertation	a long scholarly research pa-
	per required for the doctor's
	degree; generally speaking, a
	dissertation is longer than a
	thesis and requires the writer
	to make an original contribu-
	tion in his field

Students and schoolwork: capable, talented, brilliant, intelligent, well-read; diligent conscientious, painstaking, hardworking, industrious; well-behaved, cooperative, ambitious; shy, timid;

unintelligent, dull, stupid; negligent, lazy, careless; cheeky, impudent, arrogant, brazen, self-indulgent;

to apply oneself, cram, swot, have a good head / no head for (science, etc.), (languages, etc.) come easy to sb., have a knack for, make good / no progress at school, neglect one's studies, stay away from school, skip school, play truant, cheat at tests, lag behind, have gaps in knowledge, to catch up with.

Teachers and teaching: intellectual, competent, enthusiastic, efficient, broadminded, friendly, encouraging, democratic, sympathetic, fair, witty, humorous;

limited, incompetent, narrowminded, autocratic, unsympathetic, strict, exacting, touchy, revengeful, unfair, prejudiced, arrogant, humourless;

have an engaging manner of presenting the material, well-planned / clear presentation, a carrying voice, have a way with one, all-round knowledge of the subject matter, mark papers, return homework, evaluate schoolwork.

Comprehension Questions:

- 1. What opportunities are there for high school graduates to continue their education?
- 2. What subjects are studied during the first two years at college? When do students start to major in one discipline?
- 3. What are the admission policies to institutions of higher learning? Which of them offer graduate or postcollege programs?
- 4. What academic degrees can be obtained at universities and what are the degree requirements?
- 5. Whet fields do graduate schools of art and sciences grant degrees in?

- 6. What specialities can be acquired at professional schools? Can one enter a professional school after completing high school?
- 7. What are the various academic positions that faculty members can hold?
- 8. Is tuition free at American colleges and universities?
 What are some of the ways of raising money for tuition,
 rent of rooms, food and other everyday living expenses?

1. An academic - test measures skills or accomplishments in various fields of academic study. 2. - test measures the

Vocabulary Revision.

- A. Fill the gaps with words from the list below:
- ability of a person to develop skills or to gain knowledge. 3. Students frequently live away from the school grounds. but usually all classroom buildings are located on - . 4. Wealthy graduates (alumni) sometimes - their colleges with large gifts of money that serve as a source of income for the schools. 5. The predominant feature of the American - school system is supposed to be its equal educational to children of all racial, religious, social and economic backgrounds. 6. In 1978 annual - ranged from an average of \$ 25,079 for a full professor to \$ 12,705 for an instructor. 7. When a professor - , he or she usually receives a pension, or - allowance. 8. Most undergraduate colleges require their students to take a specific number of courses to receive - degree. 9. Colleges - their students from many applicants. 10. - school trains students for specific occupations such as secretary, electric-appliance repairman or automobile mechanic. 11. Public elementary and secondary schools are free. There is no - . 12. Some private colleges are more - in their - policies than some public institu-

tions. 13. More than 2,000 students submitted - for admission to Tartu University but only half of that number - as Freshmen. 14. Because of diverse teaching methods and non-standardized - , no two classes are identical. 15. Students who make assertions that contradict the professor's point of view should be prepared to - their positions.

16. In the teaching of science the dominant mode of - 1s generally traditional, with teachers giving lectures and students taking notes. 17. Professors expect the students to meet - for the submission of a paper. 18. The instructor gave the students a long reading - , but did not discuss the information in class.

assignment, tuition, admission, application, enrol, substantiate, opportunity, public, retire, retirement, bachelor, vocational, campus, achievement, secular, endow, aptitude, chaotic, salary, select, selective, curriculum, instruction, deadline

B. Finish the sentences:

- In most colleges the first two years are designed to provide ... During this time the college student is usually required to take courses in general areas of study, such as ...
- 2. By the junior year the student begins to major ...
- Graduate degrees in fields such as English literature, chemistry and history are granted by ...
- 4. A cendidate for a Ph.D. must meet ..., pass ..., and present ...
- Many universities have professional schools for study in such fields as ...
- 6. Medical students must complete ... before they can enter
- 7. The various disciplines, or fields of study, are organized by ..., which are staffed by faculty members ranging from ...
- 8. At the bottom of the academic ladder are ...
- 9. Sometimes graduate students are employed as ...
- 10. Violation of the honour system can result in ...
- 11. Private colleges are privately run; public institutions are operated ...
- 12. Admission to a state university is usually open to ...
- 13. Many state universities require their applicants to earn high scores on ...
- 14. Professors may establish social relationships with stu-

- dents outside the classroom. but in the classroom ...
- 15. When research is assigned, the professor expects the student ...
- C. Paraphrase the following sentences, replacing the underlined words by those from the list below:
- E.g. All children are required to attend school.

 School attendance is compulsory for all children
- The academic <u>program</u> of most high schools includes English, mathematics, social science, and laboratory science.
- 2. A child who is crippled has a physical disability.
- State and local taxes <u>provide the money for</u> public education.
- 4. Most children attend schools <u>located in areas where they</u> live.
- 5. Public schools in the United States are not related to any church group and do not provide religious education.
- Training for occupations such as secretary and automobile repairperson is provided by certain high school programs.
- 7. Children who attend public schools do not have to pay fees for their education.

vocational, secular, tuition, neighborhood, expenditure, curriculum, compulsory, finance, handicap

D. Translate:

1. Vastuvõtukomisjon langetab lõpliku otsuse eksamitulemuste, vestluse ja keskkooli lõputunnistuse põhjal, võttes samuti arvesse soovitust õpetajatelt. 2. Mõned üliõpilased saavad stipendiumi ja õppelaenu, mis aitab tasuda õppemaksu. 3. Õppemaks ei kata üüri, söögi, õpikute ostmise ja huvialaringide tööst osavõtmisega seotud kulutusi. 4. Vanemate kursuste seminarides omab õppejõud vaid suunavat rolli: üliõpilased peavad ise ettekandeid ja viivad läbi diskussioone. 5. 98-st keskkooli lõpetajast, kes avaldasid soovi õppida inglise filoloogia osakonnas, võeti vastu vaid 30. 6. Sotsioloogia ja majandus on ühiskonnateaduste distsipliinid.

7. Need, kes soovivad astuda ülikooli, peavad kirjutama avalduse, täitma ankeedi, maksma õppemaksu ja saavutama häid tulemusi eksamitel ja kutsesobivuse testidel. 8. Usaldusprintsiibi rikkumine võib kaasa tuua ainekursuselt kõrvaldamise, märkuse isiklikku toimikusse või ülikoolist väljaheitmise. Eksamitel spikerdamine ja plagiaat on rangelt keelatud. 9. Ülikooli esimese astme lõpetajad. kellel on korge keskmine hinne ja head võimed teaduslikuks tööks. võivad jätkata õppimist magistratuuris. 10. Metoodiliste võtete mitmekesisus ja ühtsete õppeprogrammide puudumine põhjustavad õpetuses väga suuri erinevusi. 11. Ameerika Ühendriikides on riiklik üldharidus kohustuslik, tasuta ja lahutatud kirikust, ja ootuste kohaselt peaks andma kõigile vordsed voimalused hariduse omandamiseks. 12. Ehituseks. hoonete korrashoiuks, ôppejôudude palkadeks ja ôpikute ostmiseks eraldatavad summad kasvavad aastast aastasse.13. Üleminek algkoolist keskkooli toimub automaatselt ilma eksamiteta. 14. Keskkool on üles ehitatud ühendkooli põhimõttel ja seega pakub üld- ja kutseharidust ja gumnaasiumiharidust. mis valmistab ette ülikooliks. 15. Suurt tähelepanu pööratakse puuetega laste õpetamisele. Laps-invaliide. kuulmisja nägemishäiretega, samuti psüühiliste ja vaimsete puuetega lapsi ôpetatakse eriprogrammide alusel.

Problem Solving:

In pairs or in small groups discuss what the student or teacher should do in the following situations. Tell the rest of the class what your solution of the problem was.

- 1. In front of the class, the teacher makes an obviously incorrect statement that confuses all but one of the students. This student feels that it would be a good idea to clarify the misunderstanding for the rest of the class.
- 2. A teacher is correcting examination papers and notices that three students have the same wrong answers for every question. It is obvious that these students have cheated. The teacher must do something about it.
- 3. A student has paid a lot of money for his university courses. In one of these courses, the teacher is not doing

an adequate job. The student feels that she never prepares for classes, wastes time with checking attendance and making unimportant announcements, gives poor lectures, and returns homework late. The student feels that it is necessary to say or do something.

Chart Analysis:

- 1. Consult Figure 1 and find out who are the closest associates to the President of Georgetown University and what administrative and academic matters are within their competence. Which faculties (Schools) seem to be the most prestigeous ones and are headed by a Vice-President or Chancellor? In class, with the help of the instructor, try to draw up the organizational chart of your university.
- 2. Consult Figure 2. Explain the American school system to the rest of the class.

Discussion and Composition Topics:

- American secondary schools place great emphasis on extracurricular activities. What about Estonian secondary schools? What are the most popular extracurricular activities?
- 2. Compare the elementary school system and the high school system in the United States with the educational system in your country. Speak about the types of schools, attendance requirements, size of classes, teacher qualifications and curricula. What kind of specialized schools for gifted children do you know? How are children selected for these schools? Should children be allowed to enter secondary schools automatically after completion of primary schools or should they be selected? Why?
- 3. What kind of student could be considered an ideal student? What is your idea of a good (or bad) teacher?
